"ONE Lab Smart Dock will function both as a visual reference and spatial matrix for ONE Lab, a unique interdisciplinary research laboratory for industrial design, synthetic biology, landscape ecology, art, architecture, and master planning. The Dock will be the communal core of work environments of New Lab facility, which will be accessible to a variety of people and allow them to share equipment."

ONE Lab has been broken down into five essential programs, each with a distinct space which was deemed appropriate for the type of activities that would occur within.

**The Factory** is a place for production, manufacturing, and prototyping; the **Lab**, a place for group learning, brainstorming, and collaborators; the **Garden**, for nurturing and horticulture; the **Studio**, a place for individuality and student privacy. The Vessel enables the Dock to connect with the rest of New Lab for sharing the resources and knowledge that it brews.
